CATALOG · COMMERCE & RETAIL SECTOR

SYNTELLOGIC COMERCIO

Every sale logged, every cash count exact.

Adding up sales by hand, balancing the register at closing, and not really knowing which product actually sells costs you time and money every day. A counter disconnected from inventory is the root of most of those errors.

Focused on: stores, stationery shops, pharmacies, boutiques, restaurants and any business selling directly to the public

SYNTELLOGIC · POINT OF SALE

Checkout, cash count and counter control

Every sale, every product and every cash count, in one place.

THE PROBLEM

Adding up sales by hand, calculating the cash count at the end of the day, and not really knowing which product actually sells generate errors and lost time every day.

OUR SOLUTION

A point of sale connected to inventory: every sale deducts stock automatically and the cash count calculates itself, with no adding up receipts by hand.

FEATURED CAPABILITIES

Checkout by code or instant search

Looking up a product in a long catalog while the customer waits at the register creates pressure and lines.

The benefit: Type or scan the barcode and the product appears instantly, or filter it by category. You check out in seconds, without making the line wait.

Cart with automatic taxes & discounts

Calculating tax and discounts by hand, sale after sale, is easy to get wrong on a busy day.

The benefit: The cart calculates subtotal, tax and discount by itself: you just confirm the charge. Every cash count balances, with no surprises at the end of the day.

Flexible payment methods, with change calculation

Calculating change by hand, especially during rush hours, causes errors that come out of the business's pocket.

The benefit: Choose cash, card or transfer; in cash, the system calculates the exact change instantly.

Instantly printable receipt

The customer asks for a receipt and putting one together by hand slows down the line.

The benefit: As soon as the charge is confirmed, the system generates the ticket ready to print. You hand over a professional receipt without losing time.

Sales history with receipt number & date filter

A customer asks to look up a past sale, or your accountant asks for the month's summary, and there's nowhere to find it quickly.

The benefit: Every sale is logged with a receipt number, date, customer, cashier and payment method, filterable by date range.

Customers & their purchase history

You don't know who your repeat customers are or what they've bought before.

The benefit: Every registered customer keeps their purchase history, visible with one click.

Low-stock alerts & inventory traceability WMS

A product runs out without anyone noticing until a customer asks for it.

The benefit: The system automatically warns you when a product hits its minimum stock, and logs every movement with a reason and who did it.

Sales reports & best sellers BI

At the end of the month you don't really know which products actually drive sales or which cashier sells the most.

The benefit: A dashboard shows sales by day, best-selling products, sales by payment method and by cashier.

HOW IT WORKS, IN 3 STEPS

01

The customer picks their products and you add them to the cart with a click or a scan.

02

The system automatically calculates taxes, discounts and change if paying in cash.

03

The sale is logged and the day's cash count builds itself, with no adding up receipts by hand.

MODERNIZE YOUR COUNTER
