# SYNTELLOGIC CLÍNICO

Focus on your patients; we'll safeguard your practice.

A successful practice needs more than medical excellence. Lost records, patient no-shows from forgotten appointments, and daily cash mismanagement cause clinics to lose thousands of pesos a month in unrealized revenue.

Focused on: general practitioners, surgeons, dentists and any specialty

SYNTELLOGIC · MEDICAL PRACTICE

## Digital records, appointments and practice administration

Your clinic's history secure, fast and in the cloud.

**THE PROBLEM**

Overflowing filing cabinets, gaps in the daily schedule, and no easy way to know exactly how much the practice billed by the end of the day.

**OUR SOLUTION**

An intuitive platform that digitizes patient care and centralizes the doctor's or clinic's financial income.

### FEATURED CAPABILITIES

**Digital clinical record per patient**

Every patient has a digital record with their complete history (diagnoses, treatments, progress) accessible from any consultation, no physical filing cabinet needed.

**The benefit:** You find any patient information in seconds, even years later, and it eliminates the risk of permanently losing a physical record to an accident or disorganization.

**Automatic appointment reminders**

Before the appointment date, the patient automatically receives a reminder via WhatsApp or SMS, without your receptionist calling one by one.

**The benefit:** It reduces no-shows (estimated: up to 20-25% fewer): every appointment saved by a timely reminder is revenue that would otherwise have been lost.

**Prescriptions & notes generated during the visit**

During the visit, enter the prescription and medical notes directly into the system, automatically saved to the record, no paper prescription pad needed.

**The benefit:** The patient gets a clear, professional prescription, and you keep a permanent record of everything prescribed, useful for follow-up and to protect yourself against any question down the line.

**Real-time availability schedule**

Your front desk (and, if you want, the patient) sees exactly which time slots are open and taken, updated in real time.

**The benefit:** It reduces gaps in your daily schedule and prevents accidental double-booking, making better use of every available consultation hour.

**Payment logging per visit or treatment**

Every payment (a visit, a treatment installment, or surgery) is logged on the spot and automatically added to the day's cash count.

**The benefit:** When you close the practice, you know exactly how much was collected that day, with no adding up receipts by hand and no discovering later that something doesn't add up.

**Per-doctor fee tracking**

If the clinic works with several doctors, the system automatically splits out how much each one is owed based on the visits they performed.

**The benefit:** It eliminates end-of-month arguments or manual math over "who gets how much": the answer already comes calculated and backed by every visit.

## HOW IT WORKS, IN 3 STEPS

**01**

The patient books (or is booked by the front desk) and gets an automatic reminder before their appointment.

**02**

The doctor enters the visit, prescription, and progress notes directly into the digital record.

**03**

Every payment is logged instantly; you see the day's cash count without reconciling paperwork.

DIGITIZE YOUR MEDICAL PRACTICE

### Try the system before you decide
